*Climate Change and Community Resilience* A.K. Enamul Haque,Pranab Mukhopadhyay,Mani Nepal,Md Rumi Shammin,2021-10-21 This open access book documents myriads of ways community-based climate change adaptation and resilience programs are being implemented in South Asian countries. The narrative style of writing in this volume makes it accessible to a diverse audience from academics and researchers to practitioners in various governmental, non-governmental and international agencies. At a time when climate change presents humanity with a gloomy future, the stories of innovation, creativity, grassroots engagement and locally applicable solutions highlighted in this book provides insights into hopeful ways of approaching climate solutions. South Asian countries have been dealing with the impact of climate change for decades and thus offer valuable learning opportunities for developing countries within and beyond the region as well as many western countries that are confronting the wrath of climate induced natural disasters more recently. SANDEE has been a pioneer in the development of research and training in environmental economics and related issues in South Asia and Prof Maler has been throughout SANDEE's history, its mentor, and its strongest supporter. Many young economists in South Asia have significantly benefited from Prof Maler's guidance and inputs. The present volume on "Climate Change and Community Resilience: Insights from South Asia" is a fitting tribute and an excellent reflection of Prof Maler's contributions to the SANDEE programme throughout his association. - Mahesh Banskota, Ph.D. Professor, Development Studies School of Arts, Kathmandu University This comprehensive volume aptly identifies grassroots initiatives as the core of the problem of adaptation to climate change. The analysis of the different experiments is lucid, inclusive, and full of interesting detail. The methodologies used and the subjects covered span a range of frameworks and narratives. Put together, the studies are a fitting tribute to Karl-Goran Maler, who spent years putting his impeccable expertise to use for the cause of enhancing research in South Asia. - Kanchan Chopra, Ph.D. Former Director and Professor, Institute of Economic Growth, Delhi, and Fellow, SANDEE The slow international policy response to climate change elevates the importance of understanding how communities can respond to climate change's many threats. This unusually accessible volume provides that understanding for South Asia while being relevant to the rest of the world. Its emphasis on research by scholars from the region makes it a wonderful tribute to Prof. Karl-Göran Mäler, who contributed so much to the growth of environmental economics research capacity in South Asia. - Jeffrey R. Vincent, Ph.D. Clarence F. Korstian Professor of Forest Economics & Management

Sanctuary People Gina M. Pérez,2024-06-25 This book explores the ways faith-based organizing among Latina/o communities in Ohio helped to create places of sanctuary, safety, and refuge from 2016-2020. It argues for a conceptualization of sanctuary that is capacious and captures the experiences of immigrants facing family separation and deportation as well as Puerto Rican migrants displaced from natural disasters, like Hurricane María--

*Dangerous Years* David W. Orr,2016-01-01 Considers future of civilization in the light of what we know about climate change and related threats. David Orr, an award-winning, internationally recognized leader in the field of sustainability and environmental education, pulls no punches: even with the Paris Agreement of 2015, Earth systems will not reach a new equilibrium for centuries. Earth is becoming a different planet, more threadbare and less biologically diverse, with more acidic oceans and a hotter, more capricious climate. Furthermore, technology will not solve complex problems of sustainability.

Climate Change and Global Energy Security Marilyn A. Brown,Benjamin K. Sovacool,2011-08-12 An exploration of commercially available technologies that can enhance energy security and address climate change and public policy options crucial to their adoption. Tackling climate change and improving energy security are two of the twenty-first century's greatest challenges. In this book, Marilyn Brown and Benjamin Sovacool offer detailed assessments of the most advanced commercially available technologies for strengthening global energy security, mitigating the effects of climate change, and enhancing resilience through adaptation and geo-engineering. They also evaluate the barriers to the deployment of these technologies and critically review public policy options crucial to their adoption. Arguing that society has all the technologies necessary for the task, Brown and Sovacool discuss an array of options available today, including high-efficiency transportation, renewable energy, carbon sequestration, and demand-side management. They offer eight case studies from around the world that document successful approaches to reducing emissions of greenhouse gases and improving energy security. These include the Danish approach to energy policy and wind power, Brazil's ethanol program, China's improved cookstove program; and the U.S. Toxics Release Inventory. Brown and Sovacool argue that meeting the twin challenges of climate change and energy security will allow us to provide energy, maintain economic growth, and preserve the natural environment—without forcing tradeoffs among them.

**Whale Snow** Chie Sakakibara,2020-10-06 As a mythical creature, the whale has been responsible for many transformations in the world. It is an enchanting being that humans have long felt a connection to. In the contemporary environmental imagination, whales are charismatic megafauna feeding our environmentalism and aspirations for a better and more sustainable future. Using multispecies ethnography, *Whale Snow* explores how everyday the relatedness of the Iñupiat of Arctic Alaska and the bowhead whale forms and transforms “the human” through their encounters with modernity. Whale

Snow shows how the people live in the world that intersects with other beings, how these connections came into being, and, most importantly, how such intimate and intense relations help humans survive the social challenges incurred by climate change. In this time of ecological transition, exploring multispecies relatedness is crucial as it keeps social capacities to adapt relational, elastic, and resilient. In the Arctic, climate, culture, and human resilience are connected through bowhead whaling. In *Whale Snow* we see how climate change disrupts this ancient practice and, in the process, affects a vital expression of Indigenous sovereignty. Ultimately, though, this book offers a story of hope grounded in multispecies resilience.

*Vacant to Vibrant* Sandra Albro, 2019-04-30 Vacant lots, so often seen as neighborhood blight, have the potential to be a key element of community revitalization. As manufacturing cities reinvent themselves after decades of lost jobs and population, abundant vacant land resources and interest in green infrastructure are expanding opportunities for community and environmental resilience. *Vacant to Vibrant* explains how inexpensive green infrastructure projects can reduce stormwater runoff and pollution, and provide neighborhood amenities, especially in areas with little or no access to existing green space. Sandra Albro offers practical insights through her experience leading the five-year *Vacant to Vibrant* project, which piloted the creation of green infrastructure networks in Gary, Indiana; Cleveland, Ohio; and Buffalo, New York. *Vacant to Vibrant* provides a point of comparison among the three cities as they adapt old systems to new, green technology. An overview of the larger economic and social dynamics in play throughout the Rust Belt region establishes context for the promise of green infrastructure. Albro then offers lessons learned from the *Vacant to Vibrant* project, including planning, design, community engagement, implementation, and maintenance successes and challenges. An appendix shows designs and plans that can be adapted to small vacant lots. Landscape architects and other professionals whose work involves urban greening will learn new approaches for creating infrastructure networks and facilitating more equitable access to green space.

**Greenhouse Gases** Guoxiang Liu, 2012-03-14 Understanding greenhouse gas sources, emissions, measurements, and management is essential for capture, utilization, reduction, and storage of greenhouse gas, which plays a crucial role in issues such as global warming and climate change. Taking advantage of the authors' experience in greenhouse gases, this book discusses an overview of recently developed techniques, methods, and strategies: - A comprehensive source investigation of greenhouse gases that are emitted from hydrocarbon reservoirs, vehicle transportation, agricultural landscapes, farms, non-cattle confined buildings, and so on. - Recently developed detection and measurement techniques and methods such as photoacoustic spectroscopy, landfill-based carbon dioxide and methane measurement, and miniaturized mass spectrometer.

**Handbook of Theory and Practice of Sustainable Development in Higher Education** Walter Leal Filho, Mark

Mifsud,Chris Shiel,Rudi Pretorius,2016-12-01 This Handbook approaches sustainable development in higher education from an integrated perspective, addressing the dearth of publications on the subject. It offers a unique overview of what universities around the world are doing to implement sustainable development (i.e. via curriculum innovation, research, activities, or practical projects) and how their efforts relate to education for sustainable development at the university level. The Handbook gathers a wealth of information, ideas, best practices and lessons learned in the context of executing concrete projects, and assesses methodological approaches to integrating the topic of sustainable development in university curricula. Lastly, it documents and disseminates the veritable treasure trove of practical experience currently available on sustainability in higher education.

*Climate Change, Literature, and Environmental Justice* Janet Fiskio,2021-04-22 This book shows how the discourse of climate change emerges within histories of colonization, enslavement, and revolution. By placing climate change within the longer histories of enslavement and settler colonialism, Janet Fiskio reveals the connections between climate change activism and enslavement, genocide, imperialism, white supremacy, incarceration. Organized around three themes-speculative pasts and futures; practices of dissent, mourning, and repair; and everyday inhabitation and social care-Climate Change, Literature, and Environmental Justice shows the ways that frontline communities resist environmental racism and protect and repair the world. It provides analysis of expressive cultures, including literature, dance, protest movements, oral history, and cooking utilizing decolonial and reparative theories. It offers readings of key figures, such as Octavia Butler, Louise Erdrich, Winona LaDuke, Mark Nowak, Simon Ortiz, Jesmyn Ward, and Colson Whitehead--

**The Economic Value of the Environment** Joy E. Hecht,1999 Cases from South Asia.

**Environmental Humanities in Central Asia** Jeanne Féaux de la Croix,Beatrice Penati,2023-09-01 This book is the first collection to showcase the flourishing field of environmental humanities in Central Asia. A region larger than Europe, Central Asia possesses an astounding range of environments, from deserts to glaciated peaks. The volume brings into conversation scholarship from history to social anthropology, demonstrating the contribution that interdisciplinary and engaged research offers to many urgent issues in the region: from the history of conservationism to the tactics of environmental movements, from literary engagements with 'pure nature' to the impact of fossil fuel extraction. The collection focuses on the Central Asian republics of the former USSR, where a complex layering of nomadic and sedentary, Turkic and Persianate, Islamic and Soviet cultures ends up affecting human relations with distinct environments. Featuring state-of-the-art contributions, the book enquires into human-environment relations through a broad-brush typology of interactive modes: to extract, protect, enspirit and fear. Broadening the scope of analysis beyond a consideration of power, the authors bring into focus alternative local cosmologies and the unintended consequences of environmental policy. The volume highlights scholarship from within Central Asia as well as expertise elsewhere, offering readers diverse modes of knowledge-production in the environmental

humanities. This book is an important resource for researchers and students of the environmental humanities, sustainability, history, politics, anthropology and geography of Asia, as well as Soviet and Post-Soviet studies. Chapter 11 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

*Food and Poverty* Leslie Hossfeld, E. Brooke Kelly, Julia Waity, 2021-04-30 Food insecurity rates, which skyrocketed with the Great Recession, have yet to fall to pre-recession levels. Food pantries are stretched thin, and states are imposing new restrictions on programs like SNAP that are preventing people from getting crucial government assistance. At the same time, we see an increase in obesity that results from lack of access to healthy foods. The poor face a daily choice between paying bills and paying for food.

**The Wealth of Nations and Regions** Shunsuke Managi, 2016-11-25 There is an increasing interest in inclusive wealth, and inclusive wealth can be a solution to the problematic narrowness of the traditional national accounting system, which has been recognized for a long time. This book offers a comprehensive guide on this subject of inclusive wealth.

**Paul B. Thompson's Philosophy of Agriculture** Samantha Noll, Zachary Piso, 2024-01-01 This book explores the philosophical thought and praxis of Paul B. Thompson, who planted some of the first seeds of philosophy of agriculture and whose work inspires interdisciplinary scholarship in food ethics, biotechnology, and environmental philosophy. Landmark texts such as *The Spirit of the Soil*, *The Agrarian Vision*, and *From Field to Fork* revealed the fertility of food systems for inspiring reflection on our relationships to technology, the land, and one another. Rooted in philosophical traditions ranging from pragmatism to post-phenomenology, Thompson's work nourishes projects in ethics, epistemology, philosophy of science, and social and political theory, not only in academic philosophy departments but also in the social and natural sciences. This volume collects this diversity of thought in a tour of the many fields of food systems; from theorizing the sustainability of agroecological systems, to appreciating the quotidian practice of agrarian communities, to anticipating the impacts of emerging biotechnology, and to savoring the roles that food plays in forming our identities. Composed by an international crop of scholars working on the future of food ethics, the volume is a vital contribution to scholars and practitioners thinking through our relationships to the food systems that sustain us.

Environmental Justice in Ethnic American Literature Petr Kopecký, Jan Beneš, 2024-12-21 *Environmental Justice in Ethnic American Literature* focuses on a wide range of conceptions, depictions, and issues of environmental (in)justice found in African American, Latinx, Asian American, and American Indian literature to provide a panorama of ethnic peoples, regions, and cultures affected by disproportionate exposure to environmental hazards and racial discrimination, now exacerbated by the effects of climate change. Specifically, the volume highlights the capacity of literature and literary criticism to help uncover the causes and consequences of instances of environmental injustice and their impact. The chapters analyze a

diverse selection of voices and texts, which underscore how the literary imagination of ethnic American writers captures, in contrast with official statistics, impersonal data and the reports compiled from them, the tangible and often inescapable problems of communities struggling against environmental racism. The issues addressed in the volume range from slow violence, transcorporeality, food and reproductive justice, to agrarianism, while utilizing theoretical lenses such as ecofeminist paradigms or innovative applications of ecolinguistic methods to poetry. Overall, the monograph brings to the fore a diversity of literary responses to environmental racism and calls for environmental justice.

Just Transitions Seema Arora-Jonsson, Kavya Michael, Manish Kumar Shrivastava, 2023-10-04 This book turns critical feminist scrutiny on national climate policies in India and examines what transition might really mean for marginalized groups in the country. A vision of “just transitions” is increasingly being used by activists and groups to ensure that pathways towards sustainable futures are equitable and inclusive. Exploring this concept, this volume provides a feminist study of what it would take to ensure just transitions in India where gender, in relation to its interesting dimensions of power, is at the centre of analysis. With case studies on climate mitigation and adaptation from different parts of India, the book brings together academics, practitioners and policymakers who provide commentary on sectors including agriculture, forestry and renewables. Overall, the book has relevance far beyond India’s borders, as India’s attempt to deal with its diverse population makes it a key litmus test for countries seeking to transition against a backdrop of inequality both in the Global North and South. This volume will be of great interest to students and scholars of climate policy, gender studies, sustainable development and development studies more broadly.

The Renewable Revolution Sajed Kamal, 2013-05-13 Our environment and society is threatened by fuel shortages, a changing climate and energy wars. In our race for survival we are awakened to the simple truth that the essential condition of sustainability lies in our ability to live within the limits and renewability of natural resources. It invokes within us an urgent need for transition from an obsolete, destructive and unsustainable energy path to a sustainable path of innovation, renewable energy and peace. The good news is that the technology required to make this transition is already available. From an author with over thirty years' experience campaigning for and setting up renewable energy projects around the world, this book is unique for its interdisciplinary approach-interweaving technology, economics, environmental science, philosophy, history, spirituality and politics, asserting that to understand the crisis and find a sustainable solution requires a holistic perspective. Readers will understand the vast renewable resource we have at our disposal in the form of solar, wind, water, heat and biogas, and the technologies used to harness this power. There are also the emerging prospects of solar hydrogen fuel cells, biofuels and geothermal. The true economic advantages of a shift to a renewables-based economy (and how we can get there) are also laid out clearly. There's much to learn from examples around the world while we devise local and appropriate solutions. Written for a crossover readership of students, educators, professionals, academics, activists and

policymakers, both nationally and internationally, this is a comprehensive but readable and practical book that will inspire readers to wake others up to our renewable solutions.

**Recollections from My Journey Through Life** Shaukat Hassan,2020-11-23 Every person has a story to tell. This is the story of a Bangladeshi who was born one cold December morning in the village of Lostimanika in East Pakistan and went on to traverse the world during the next sixty plus years. It is a story of growing up in the peaceful Hindu-Muslim community of Narayanganj, of a Muslim boy being educated in Catholic schools, and of leaving home to study in the West when he was merely seventeen. That started a fifty-year journey from his homeland to his present home in Canada. Through it all, he lived and worked in six continents and experienced the beauty and diversity as well as the complexities and hardships faced by peoples worldwide. This book is a personal story, a collection of snippets from his eventful journey through life. The author shares many delightful anecdotes, the scary moments that spelt danger, and his occasional brush with death. It is also a story of visits to many historical, cultural, and religious sites, and of learning about man's contribution to humanity. The author has worked with many governments, civil society organizations, academics, the military, and the media under challenging circumstances and often in hazardous environments. It is in the end a story of surmounting all obstacles and of having lived a full and happy life.

*Climate Adaptation and Resilience Across Scales* Nicholas B. Rajkovich,Seth H. Holmes,2021-11-15 *Climate Adaptation and Resilience Across Scales* provides professionals with guidance on adapting the built environment to a changing climate. This edited volume brings together practitioners and researchers to discuss climate-related resilience from the building to the city scale. This book highlights North American cases that deal with issues such as climate projections, public health, adaptive capacity of vulnerable populations, and design interventions for floodplains, making the content applicable to many locations around the world. The contributors in this book discuss topics ranging from how built environment professionals respond to a changing climate, to how the building stock may need to adapt to climate change, to how resilience is currently being addressed in the design, construction, and operations communities. The purpose of this book is to provide a better understanding of climate change impacts, vulnerability, and resilience across scales of the built environment. Architects, urban designers, planners, landscape architects, and engineers will find this a useful resource for adapting buildings and cities to a changing climate.

**Environmental Performance Measurement** World Economic Forum,2002-02-28 Environmental decision-making has long been plagued by uncertainties and a lack of critical information. The data and analyses needed for thoughtful and systematic action to minimize pollution harms and to optimize the use of natural resources are often unavailable or seem too costly to obtain. As a result, choices are made on the basis of generalized observations and best guesses, or worse yet, rhetoric or emotion. *Environmental Performance Measurement: The Global Report 2001-2002* presents a new approach to

environmental decision-making based on facts and analytic rigor. It collects in one place the largest amount of environmental data that has ever been assembled at the nation-state scale. Presented here is the first serious attempt not only to measure environmental sustainability in one summary indicator, but also to rank 122 countries on the basis of this index. In addition, country profiles provide detailed information about the environmental performance of these countries across 22 critical environmental indicators. Written by both academics and practitioners, this report is an essential tool for environmental performance decision-making in many realms and in all countries across the world.
