Functional Assessment for Adults with Disabilities National Academies of Sciences, Engineering, and Medicine,Health  
and Medicine Division,Board on Health Care Services,Committee on Functional Assessment for Adults with  
Disabilities,2019-08-31 The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security  
Disability Insurance (SSDI) and Supplemental Security Income (SSI) programs. To receive SSDI or SSI disability benefits, an  
individual must meet the statutory definition of disability, which is the inability to engage in any substantial gainful activity  
[SGA] by reason of any medically determinable physical or mental impairment which can be expected to result in death or  
which has lasted or can be expected to last for a continuous period of not less than 12 months. SSA uses a five-step  
sequential process to determine whether an adult applicant meets this definition. Functional Assessment for Adults with  
Disabilities examines ways to collect information about an individual's physical and mental (cognitive and noncognitive)  
functional abilities relevant to work requirements. This report discusses the types of information that support findings of  
limitations in functional abilities relevant to work requirements, and provides findings and conclusions regarding the  
collection of information and assessment of functional abilities relevant to work requirements.
