The Common Law Inside the Female Body Anita Bernstein, 2018-12-20 In *The Common Law Inside the Female Body*, Anita Bernstein explains why lawyers seeking gender progress from primary legal materials should start with the common law. Despite its reputation for supporting conservatism and inequality, today's common law shares important commitments with feminism, namely in precepts and doctrines that strengthen the freedom of individuals and from there the struggle against the subjugation of women. By re-invigorating both the common law - with a focus on crimes, contracts, torts, and property - and feminist jurisprudence, this highly original work anticipates a vital future for a pair of venerable jurisprudential traditions. It should be read by anyone interested in understanding how the common law delivers an extraordinary degree of liberty and security to all persons - women included.

Vibrant and Healthy Kids National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Applying Neurobiological and Socio-Behavioral Sciences from Prenatal Through Early Childhood Development: A Health Equity Approach, 2019-12-27 Children are the foundation of the United States, and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes, despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. *Vibrant and Healthy Kids: Aligning Science, Practice, and Policy to Advance Health Equity* builds upon and updates research from *Communities in Action: Pathways to Health Equity* (2017) and *From Neurons to Neighborhoods: The Science of Early Childhood Development* (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current brain and development science to the real world, a roadmap for implementing tailored interventions, and recommendations about improving systems to better align with our understanding of the significant impact of health equity.

Science and Babies Institute of Medicine, Suzanne Wymelenberg, 1990-02-01 By all indicators, the reproductive health

of Americans has been deteriorating since 1980. Our nation is troubled by rates of teen pregnancies and newborn deaths that are worse than almost all others in the Western world. *Science and Babies* is a straightforward presentation of the major reproductive issues we face that suggests answers for the public. The book discusses how the clash of opinions on sex and family planning prevents us from making a national commitment to reproductive health; why people in the United States have fewer contraceptive choices than those in many other countries; what we need to do to improve social and medical services for teens and people living in poverty; how couples should shop for a fertility service and make consumer-wise decisions; and what we can expect in the future—featuring interesting accounts of potential scientific advances.

The Case for Birth Control Margaret Sanger, 1917

Prenatal Care Institute of Medicine, Division of Health Promotion and Disease Prevention, Committee to Study Outreach for Prenatal Care, 1988-02-01 Prenatal care programs have proven effective in improving birth outcomes and preventing low birthweight. Yet over one-fourth of all pregnant women in the United States do not begin prenatal care in the first 3 months of pregnancy, and for some groups—such as black teenagers—participation in prenatal care is declining. To find out why, the authors studied 30 prenatal care programs and analyzed surveys of mothers who did not seek prenatal care. This new book reports their findings and offers specific recommendations for improving the nation's maternity system and increasing the use of prenatal care programs.

China's Family Planning Program Judith Banister, Christina Wu Harbaugh, 1994

When Abortion Was a Crime Leslie J. Reagan, 1996-12-31 Examines the entire period during which abortion was secret and illegal in the United States, from the mid-nineteenth century until *Roe v. Wade* in 1973.

The Turnaway Study Diana Greene Foster, 2021-06 Now with a new afterword by the author--Back cover.

Contraception and Reproduction Working Group on the Health Consequences of Contraceptive Use and Controlled Fertility, 1989 Se estudian las consecuencias sanitarias de los diferentes patrones reproductivos en la salud de la mujer y de los niños. También se evalúan el riesgo y los beneficios de los diferentes métodos anticonceptivos, aunque algunos de los datos en los que se basa son de países desarrollados, el núcleo central del informe son los países en desarrollo.

The Best Intentions Institute of Medicine, Committee on Unintended Pregnancy, 1995-07-02 Experts estimate that nearly 60 percent of all U.S. pregnancies—and 81 percent of pregnancies among adolescents—are unintended. Yet the topic of preventing these unintended pregnancies has long been treated gingerly because of personal sensitivities and public controversies, especially the angry debate over abortion. Additionally, child welfare advocates long have overlooked the connection between pregnancy planning and the improved well-being of families and communities that results when children are wanted. Now, current issues—health care and welfare reform, and the new international focus on population—are drawing attention to the consequences of unintended pregnancy. In this climate *The Best Intentions* offers a timely

exploration of family planning issues from a distinguished panel of experts. This committee sheds much-needed light on the questions and controversies surrounding unintended pregnancy. The book offers specific recommendations to put the United States on par with other developed nations in terms of contraceptive attitudes and policies, and it considers the effectiveness of over 20 pregnancy prevention programs. The Best Intentions explores problematic definitions—unintended versus unwanted versus mistimed—and presents data on pregnancy rates and trends. The book also summarizes the health and social consequences of unintended pregnancies, for both men and women, and for the children they bear. Why does unintended pregnancy occur? In discussions of reasons behind the rates, the book examines Americans' ambivalence about sexuality and the many other social, cultural, religious, and economic factors that affect our approach to contraception. The committee explores the complicated web of peer pressure, life aspirations, and notions of romance that shape an individual's decisions about sex, contraception, and pregnancy. And the book looks at such practical issues as the attitudes of doctors toward birth control and the place of contraception in both health insurance and managed care. The Best Intentions offers frank discussion, synthesis of data, and policy recommendations on one of today's most sensitive social topics. This book will be important to policymakers, health and social service personnel, foundation executives, opinion leaders, researchers, and concerned individuals.

Parenting Matters National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Supporting the Parents of Young Children, 2016-11-21

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young

children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Unplanned Abby Johnson, 2011-01-11 When Abby Johnson, director of a Planned Parenthood clinic in Texas, walked across the road in October 2009 to join the Coalition for Life, she made national headlines. In *Unplanned*, she tells her story from both sides of the abortion clinic property line.

The Safety and Quality of Abortion Care in the United States National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Board on Population Health and Public Health Practice, Committee on Reproductive Health Services: Assessing the Safety and Quality of Abortion Care in the U.S., 2018-05-24 Abortion is a legal medical procedure that has been provided to millions of American women. Since the Institute of Medicine first reviewed the health implications of national legalized abortion in 1975, there has been a plethora of related scientific research, including well-designed randomized clinical trials, systematic reviews, and epidemiological studies examining abortion care. This research has focused on examining the relative safety of abortion methods and the appropriateness of methods for different clinical circumstances. With this growing body of research, earlier abortion methods have been refined, discontinued, and new approaches have been developed. *The Safety and Quality of Abortion Care in the United States* offers a comprehensive review of the current state of the science related to the provision of safe, high-quality abortion services in the United States. This report considers 8 research questions and presents conclusions, including gaps in research.

Unnatural Selection Mara Hvistendahl, 2011 Lianyungang, a booming port city, has China's most extreme gender ratio for children under four: 163 boys for every 100 girls. These numbers don't seem terribly grim, but in ten years, the skewed sex ratio will pose a colossal challenge. By the time those children reach adulthood, their generation will have twenty-four million more men than women. The prognosis for China's neighbors is no less bleak: Asia now has 163 million females missing from its population. Gender imbalance reaches far beyond Asia, affecting Georgia, Eastern Europe, and cities in the U.S. where there are significant immigrant populations. The world, therefore, is becoming increasingly male, and this mismatch is likely to create profound social upheaval. Historically, eras in which there have been an excess of men have produced periods of

violent conflict and instability. Mara Hvistendahl has written a stunning, impeccably-researched book that does not flinch from examining not only the consequences of the misbegotten policies of sex selection but Western complicity with them--

Blessed are the Barren Robert Gerard Marshall, Charles A. Donovan, 1991

Biomedical Politics Institute of Medicine, Division of Health Sciences Policy, Committee to Study Decision Making, 1991-02-01 The abortifacient RU-486 was born in the laboratory, but its history has been shaped by legislators, corporate marketing executives, and protesters on both sides of the abortion debate. This volume explores how society

decides what to do when discoveries such as RU-486 raise complex and emotional policy issues. Six case studies with insightful commentary offer a revealing look at the interplay of scientists, interest groups, the U.S. Congress, federal agencies, and the public in determining biomedical public policy—and suggest how decision making might become more reasoned and productive in the future. The studies are fascinating and highly readable accounts of the personal interactions behind the headlines. They cover dideoxyinosine (ddI), RU-486, Medicare coverage for victims of chronic kidney failure, the human genome project, fetal tissue transplantation, and the 1975 Asilomar conference on recombinant DNA.
