Elaboración de guías de laboratorio de ensayos destructivos (ED) y no destructivos (END) aplicados a la evaluación de las propiedades y defectología de los materiales Alejandro Castrillón Toro, 2014 Resumen: El presente documento tiene como objetivo la elaboración de las guías de laboratorio de ensayos destructivos y no destructivos aplicados a la evaluación de las propiedades y defectología de los materiales; todo esto con el fin de complementar las prácticas de los laboratorios de corrosión y resistencia de materiales que se llevan a cabo en la Facultad de Ingeniería Mecánica. La metodología que se utilizó para obtener este trabajo, consiste en la investigación exhaustiva de todos los procedimientos y requerimientos necesarios para llevar a cabo cada una de las prácticas de laboratorio con sus respectivos equipos; tomando como base documentos relacionados con los temas tratados como: trabajos de grado de estudiantes de la Facultad de Ingeniería Mecánica, normas ASTM, manuales de los equipos utilizados, libros de biblioteca y artículos de internet entre otros. Se hizo una recopilación de cada una de las normas ASTM que se utilizan en los ensayos de las prácticas de laboratorio para definir muchos de los parámetros y requerimientos técnicos necesarios. Luego se lleva todo esto a la práctica por medio de la manipulación de los equipos y materiales con el fin de definir los procedimientos técnicos y recomendaciones que servirán de base para la elaboración de las guías. Finalmente se elaboran las guías de laboratorio de los diferentes ensayos para cumplir con el objetivo propuesto y poder brindar una herramienta más a las nuevas generaciones de estudiantes de la Facultad de Ingeniería Mecánica.
