Basic Epithelial Ion Transport Principles and Function Kirk L. Hamilton, Daniel C. Devor, 2020-11-26 This book discusses unique ion channels and transporters that are located within epithelial tissues of various organs including the kidney, intestine, pancreas and respiratory tract. As the authors show, these channels and transporters play crucial roles in transepithelial ion and fluid transport across epithelia and their contribution to maintaining homeostasis. Readers will be introduced to the fundamentals of ion transport in terms of function, modelling, regulation, structure and pharmacology. This is the first of three volumes highlighting the importance of epithelial ion channels and transporters in basic physiology and pathophysiology of human diseases. This volume focuses on basic fundamentals of epithelial transport physiology. There is a range of chapters dedicated to specific aspects of epithelial ion transport and cell function. Accordingly, the authors discuss techniques used to determine epithelial function, principles of epithelia transport, polarization of epithelial cells, mathematical modelling of epithelial ion transport, protein folding of ion channels, degradation epithelial ion channels, fundamentals of epithelial sodium, potassium and chloride transport, fundamentals of bicarbonate secretion, volume regulation, and microRNA regulation of epithelial channels and transporters. Given its scope, Volume 1 offers a valuable resource for physiology students, scientists and clinicians alike.

**Ion Channels and Transporters of Epithelia in Health and Disease** Kirk L. Hamilton, Daniel C Devor, 2015-12-14 This book sheds new light on the physiology, molecular biology and pathophysiology of epithelial ion channels and transporters. It combines the basic cellular models and functions by means of a compelling clinical perspective, addressing aspects from the laboratory bench to the bedside. The individual chapters, written by leading scientists and clinicians, explore specific ion channels and transporters located in the epithelial tissues of the kidney, intestine, pancreas and respiratory tract, all of which play a crucial part in maintaining homeostasis. Further topics include the fundamentals of epithelial transport; mathematical modeling of ion transport; cell volume regulation; membrane protein folding and trafficking; transepithelial transport functions; and lastly, a discussion of transport proteins as potential pharmacological targets with a focus on the pharmacology of potassium channels.

**Child Psychopathology** Barry H. Schneider,2014-12-04 This textbook covers the classification, causes, treatment and prevention of psychological disorders in the infant through the adolescent years. Chapters balance the social and historical context of psychopathology with the physiological roots of abnormal behavior, leading students to a comprehensive understanding of child psychopathology. The book is totally up-to-date, including coverage of the DSM-5 and criticisms of it. In four parts, this textbook describes the empirical bases of child psychopathology as well as the practice of child psychologists, outlining the classification and causes of disorders in addition to methods of assessment, intervention and treatment. Students will be able to evaluate the treatments used by professionals and debunk popular myths about atypical behavior and its treatment. Complementing the lively writing style, text boxes, clinical case studies and numerous examples from international cultures and countries add context to chapter material. Study questions, diagrams and a glossary offer further learning support.

*The Many Facets of Cosmic Explosions* Alicia Soderberg,2007-10 Over the past few years, long-duration gamma-ray bursts (GRBs), including the subclass of X-ray flashes (XRFs), have been revealed to be a rare variety of Type Ibc supernova (SN Ibc). While all these events result from the death of massive stars, the electromagnetic luminosities of GRBs and XRFs exceed those of ordinary Type Ibc SNe by many orders of magnitude. The observed diversity of stellar death corresponds to large variations in the energy, velocity, and geometry of the explosion ejecta. Using multi-wavelength (radio, optical, X-ray) observations of the nearest GRBs, XRFs, and SNe Ibc, I show that GRBs and XRFs couple at least  $10^{48}$  erg to relativistic material while SNe Ibc typically couple less than  $10^{48}$  erg to their fastest (albeit non-relativistic) outflows. Specifically, I find that less than 3 percent of local SNe Ibc show any evidence for association with a GRB or XRF. Interestingly, this dichotomy is not echoed by the properties of their optical SN emission, dominated by the radioactive decay of Nickel-56; I find that GRBs, XRFs, and SNe Ibc show significant overlap in their optical peak luminosity and photospheric velocities. Recently, I identified a new class of GRBs and XRFs that are under-luminous in comparison with the statistical sample of GRBs. Owing to their faint high-energy emission, these sub-energetic bursts are only detectable nearby (z

*The Molecular Dynamics of Liquid Crystals* G.R. Luckhurst, C.A. Veracini, 2012-12-06 Liquid-crystalline phases are now known to be formed by an ever growing range of quite diverse materials, these include those of low molecular weight as well as the novel liquid-crystalline polymers, such phases can also be induced by the addition of a solvent to amphiphilic systems leading to lyotropic liquid crystals. Irrespective of the structure of the constituent molecules these numerous liquid-crystalline phases are characterised by their long range orientational order. In addition certain phases exhibit elements of long range positional order. Our understanding, both experimental and theoretical, at the molecular level of the static behaviour of these fascinating and important materials is now well advanced. In contrast the influence of the long range order; both orientational and positional, on the molecular dynamics in liquid Crystalline Phases is less well understood. In an attempt to address this situation a NATO Advanced Study Institute devoted to liquid crystal dynamics was held at n Ciocco, Barga, Italy in September 1989. This brought together experimentalists and theoreticians concerned with the various dynamical processes occurring in all liquid crystals. The skills of the participants was impressively wide ranging; they spanned the experimental techniques used in the study of molecular dynamics, the nature of the systems investigated and the theoretical models employed to understand the results. While much was learnt it was also recognised that much more needed to be done in order to advance our understanding of molecular dynamics in liquid Crystalline Phases.

**Parenting Matters** National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Supporting the Parents of Young Children, 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus

to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

**Abnormal Child and Adolescent Psychology** Allen C. Israel, Jennifer Weil Malatras, Rita Wicks-Nelson, 2020-10-29

Abnormal Child and Adolescent Psychology is a comprehensive introduction to the field. It covers theoretical and methodological foundations and examines the characteristics, epidemiology, etiology, developmental course, assessment, and treatment of disorders of childhood and adolescence. At the heart of the text is the partnership of the developmental psychopathology perspective, which analyzes problems of youth within a developmental context, and a traditional clinical/disorder approach, which underscores the symptoms, causes, and treatments of disorders. Woven throughout the text is the view that behavior stems from the continuous interaction of multiple influences, that the problems of the young are intricately tied to their social and cultural contexts, and that empirical approaches and the scientific method provide the best avenue for understanding the complexity of human behavior. This edition explores the latest areas of research and tackles important contemporary topics, including: how to best classify and diagnose problems the Research Domain Criteria (RDoC) framework the roles of genetics and early brain development and their interaction with the environment the complex roles of family and peers; sex/gender; and culture, ethnicity, and race in psychopathology progress in early intervention and prevention improvements in accessibility and dissemination of evidence-based treatments social issues such as poverty, child maltreatment, substance use, bullying/victimization, and terrorism and war This edition also features a new full-color design and over 200 color figures, tables, and photos. The text is written in a clear and engaging style and is approachable for students with varying academic backgrounds and experiences. It is rich in case descriptions that allow students to examine problems through the lens of youth and their families. The Accent boxes foster discussion of current interest topics such as infant mental health, scientific evidence regarding vaccines and autism, suicidality in sexual minority youth, and the impact of stigmatization. The Looking Forward sections focus students' attention on the central concepts to be addressed, while the Looking Back sections provide students with a synopsis of the chapter for further study and reflection. The text is also

supplemented with online resources for students and instructors.

**Jak-Stat Signaling : From Basics to Disease** Thomas Decker, Mathias Müller, 2012-06-06 JAK tyrosine kinases and STAT transcription factors constitute a signaling pathway, which is activated by cytokines. By activating gene transcription it regulates essential biological responses to environmental cues. The Jak-Stat pathway is involved in the regulation of cell development, differentiation, proliferation and apoptosis. Improper function may contribute to hematopoietic malignancies and cancer. This book provides comprehensive insights into the latest basic and clinical developments in the field. The first part reviews recent findings and new technologies pertaining to basics of Jak-Stat function. The second part describes the evolution of Jak-Stat signaling and the role of the pathway in invertebrate organisms. The third part focuses on Jak-Stat signaling in hematopoietic cells under both physiological and pathophysiological conditions. Finally, chapters in the fourth section describe the relationship of Jak-Stat signaling to various states of disease, particularly infection, leukemias and solid cancers. The book is intended for all scientists in molecular biology, biochemistry and cell biology dealing with biomedical issues.
